Surveillance Detection – The Professional Course, Montana Boogaloo

Posted on [January 13, 2020](#) by [Anonymous Conservative](#)

A quick surveillance detection piece, for obvious reasons.

[I was surfing this thread on 4Chan when I saw the following posted by an anon:](#)

[Visit The Facebook Discussion Page](#)

The Evolutionary Psychology Behind Politics is available at Amazon at the link below. It is also offered free in Kindle format periodically. For more on that offer, see: [AnonymousConservative.com](#).
Buy the book now at Amazon.com here:

- Anonymous** (ID: [rV8ne8Z2](#))  01/10/20(Fri)05:26:11 No.239120522 [->>239120665](#) [->>239120758](#)
- I traveled quite a bit in the military over 14 years, and decided to move to Montana back in the mid-2000's. On paper, it looked perfect. Low cost of living, beautiful scenery, and lots of landmarks to discover. What I didn't take into account were the swarms or feral, inbred, backstabbing meth heads that make up the majority of the state population. I urge anyone considering a move to just about anywhere to spend some time in your potential location before you make the commitment. We stayed in Montana for a few years, but when we had enough money to break out, we did so. While Virginia is an Orwellian police state shithole, and apparently getting worse, it is nowhere near as fucking depressing and soul-crushing as living in the open air lunatic asylum known as Kalispell. For those that doubt, please, go watch the documentary "American Meth" (2008). When you are done watching it, you will have a good idea of what kind of people make up not just a small minority, but the "majority" of the population in Big Sky Country. I would imagine Alaska would be even worse than Montana, and have heard jokes about Alaska being the place where degenerate filth go to escape the rest of civilized society.
-
- Anonymous** (ID: [rV8ne8Z2](#))  01/10/20(Fri)05:36:01 No.239120984 [->>239121298](#)
- [->>239120758](#)
>I did grand jury a couple years ago in Fairbanks. Oversaw 6 six case that were all approved for trial, and they were all meth related. The people here are a disaster. The only thing that contains them is the weather.
I switched to the upstairs PC, so different ID. Question: why do you stay in Alaska? I assume you have a job that pays well? Otherwise, just as in Montana, anyone with the ability gets the fuck out as soon as they can.
-
- Anonymous** (ID: [rV8ne8Z2](#))  01/10/20(Fri)05:58:13 No.239122089 [->>239122299](#)
- [->>239121298](#)
>It's my home, I have family here, and I know how to enjoy it. I haven't had a steady job in years. I do a variety of odd jobs to get by. Lots of people need help.
Kudos to you, anon. I originally intended to open a small PC repair business in Montana, but after having my tires shivved, my windshield gouged with rocks, trash dumped in my driveway whenever I left town, and people bringing their dogs to shit in my yard in the middle of the night, I decided against putting down any roots. Grew up in and around Philadelphia, but the white trash in Montana were worse than any West Philly nigger I ever met.
-

>I thought about Alaska as a possible place to move to.
I would barely consider Alaska an improvement from South Africa. Maybe if you are a commercial welder, petroleum engineer, or something similar...well, welcome to hell.
[->>239122299](#)
>Most parts of Alaska is basically The Trailer Park Boys.
Yeah, I found that out pretty quickly when we first moved to [Cut Bank, MT](#). Sat at my PC and watched the white trash across the street pull off the interior panels of their truck and cram the entire door with bags of meth. Broad daylight, in the middle of the street, too. Faggot townies knew every minute detail of our lives, and would repeat our private conversations back to us when we went shopping, but nobody saw the strung out punks shoveling 20 pounds of crank into their rusty old hooptie. Top kek.

>There's a movie from the end of the silent era that you might enjoy (maybe, I don't know anyone but me who gets excited for silent films) called "City Girl".
Found it on YT. <https://www.youtube.com/watch?v=Bu4udEwI4wI> [\[Embed\]](#)
As I said before, I have traveled a good bit in my life. America, coast to coast, New Hampshire to Florida. South America, Caribbean, Kuwait, Saudi Arabia, Iraq, Czech Republic, Ukraine. The people in Montana were just flat out subhuman. The Hutterites we bought eggs from joked that the chief of police for Cut Bank was himself a convicted felon. He wasn't lying. Not nearly as bad here in Virginia, and the only problems I have result from me being on a federal watch list, not from anything I have done to my neighbors or what they have done to me. The takeaway from my posts should be, people should be a primary consideration, not just economic or scenic.

What Are r And K

This site asks for your help in promoting the idea that our political ideologies evolved from r/K Selection Theory in evolutionary ecology.

In evolutionary ecology, r and K describe two fundamental psychologies seen in nature, designed to adapt an organism to either a glut or a shortage.

Rabbits are r-strategists, designed to exploit free resources, like fields of grass. The five psychological traits inherent to the r-strategy are docility/conflict-avoidance, promiscuity/non-monogamy, single-mom'ing, early sexualization of young, and no loyalty to a competitive in-group. All help this glut-exploiting psychology to out-reproduce everyone else by avoiding danger, mating widely starting young, booting offspring early to mate again, and never risking for others.

Wolves are K-strategists, designed for when resources are too limited for everyone to survive. The five traits of a K-strategist are competitiveness/aggressiveness/protectiveness, competitive mate monopolization/monogamy, high-investment two-parent rearing, only mating when mature, and high loyalty to one's competitive in-group. All these traits either help you win when you have to fight, or produce and protect fitter offspring, so they will win in a dangerous world that culls the weak.

Our political battle is one between a glut-exploiting r-reproductive strategy of rabbits designed to produce raw numbers and a shortage-surviving K-reproductive strategy of wolves designed to produce quality. The swings between conservatism and liberalism at the societal level are not the result of logical argument or reasoned debate. They are the result of psychological shifts produced by perceptions of K-stimuli in the environment such as

Notice, they repeated conversations he had in his house to him when he was out in public. How does that happen? Was there someone listening to him when he was talking in his house? Were the people of the Secret Society circulating the conversations among themselves, when they had nothing better to talk about? Were they so sure they were above the law they would openly reveal this to him, and lord it over him? Yes, Yes, and Yes.

What are you saying, anon? We should check out Kalispell on google Streetview, because he is describing what sounds like a covert surveillance network, embedded in the

community, and listening in people's houses, all to facilitate a major meth trafficking operation? Why, I suppose we could do that. [Let's look at this part:](#)

Notice this little neighborhood has relatively few points of ingress and egress, so people shouldn't be cutting through it, and in the middle of the day it shouldn't have too much traffic in and out, nor should foot traffic be too high. Which means if there is coverage, it will stand out better from the background noise than it would, say, on the more populated streets of New York City at rush hour.

[Let's start here, at the bottom, heading north on that north-south road, coming from the bottom and approaching the first intersection leading into our neighborhood.:](#)

conflict, danger, and shortage, or r-stimuli, such as safety, pleasure, and abundance. These perceptions trigger ancient mechanisms in the brain that adapt psychology to environment. All of politics and much of history are r vs K.

Please consider helping to spread this theory by telling others about this site. As you can see by the shocked 5 star reviews on the book's Amazon page linked above, this idea, and the science behind it, blows people away when they see it. And best of all, it will utterly demoralize and crush any leftist you describe it to, in unbelievable fashion. This idea's beneficial effects on our governance and our freedom cannot be overestimated, if it can only spread.

As you drive in, a neighbor just happens to be home in the middle of the day, and behind the wall of their house, where they can watch as you pass by. Notice they doubled over to hide their face. If you have never been under, the probability of this would feel like 5% or less, but if you have been under, and knowing this is the google car, I would say it is about 70-80% this house is an observation post that is manned 24/7, or at least it was in 2008 when these photos were taken:

First intersection you don't see anybody:

But notice the trailer, with the pickup in front of it, and how there is a garage door open behind it:

[Lets go over and peek around the back of that trailer, into the garage:](#)

That is somebody in a pair of white pants who was standing just inside the garage, probably peeking around the corner as you approached, or watching you in the reflection of the glass on the pickup.

[Here you are exiting that little loop back onto the first street you pulled in on. The arrow will correspond to the next photo:](#)

[It turns out, even though this is the crappy 2008 resolution, you can just see somebody just happens to be behind those bushes with a garden hose as you exit this intersection:](#)

Another good indicator for streetview is that operators, knowing there is a camera, will shield their faces, and turn their backs, as they do not want to be photographed. Here are a couple, [here](#), and [here](#), from the next loop who were out, and specifically turned their backs on the google car:

We can continue through the neighborhood, and you will see a lot of people, but inside the neighborhood is only good for seeing if there are more people than you would expect to see out and about. You will not see your coverage at every intersection in a neighborhood. Once you are dealing with established observation posts in a neighborhood, actual physical surveillance is not as necessary, given there will be hidden cameras and mics, as well as maybe other tech deployed tracking you, and the smarter residents can just peek out a window.

One thing which does seem to be highly common is direct eyes on just as you pull up to an intersection of a main street that meets a neighborhood street you may turn on. So lets go back out and just check the intersections around the neighborhood, where its streets feed out onto main streets, and see if we approach the neighborhood and are ever alone. Remember, the first intersection featured the car that didn't pull out.

Here is the second intersection heading north on the first street we started on, where you have lawnmower dude and a line truck (notice because of a timeline shift, you were actually heading south here, and thus the line truck would have met the intersection exactly as you did):

[Here we are at the next intersection north:](#)

So all three intersections have eyes on just as you arrive, and two of three had cars come out just as you arrived at them.

This is the mathematics of surveillance detection. How many cars exit that neighborhood in the middle of the day? How long in seconds does each car sit at the intersection, on average, before turning out? How many seconds, timed, in total, would one of those cars be parked in an exiting street like that each day? How many seconds are there in a day?

Just to have a $\frac{2}{3}$ chance of running into a car, then for every minute of the day, there should be a car parked there, waiting to pull out for 40 full seconds per minute. If each car took eight seconds to pull out, that is five cars per minute exiting every minute. It is 300 per hour exiting, non-stop all day. Did you see that much traffic in the neighborhood? And notice the one time there was no car, there was a line truck, and a dude who should have been mowing a lawn, but who was just cooling his heels. That is how you mathematically calculate something is off.

Lets take a quick run over to [Cut Bank Montana](#), since he describes a major Cabal Meth operation there, and lets see what the intersections look like. If Cabal is doing a Walter White there, it should be loaded:

[Coming into town, here is behind us:](#)

[Here is in front of us:](#)

You can see how if every time we hit an intersection, cars just happen to be pulling up, but the road looks like this normally, it will seem strange.

[First intersection:](#)

If I take that left, it jumps to another timeline, when I came back later, and turned off that street, so lets do that. [It would be weird if I hit that intersection later, and a car just happened to be hitting it just as I pulled out, wouldn't it?](#)

[Next intersection here:](#)

[Next intersection:](#)

[Of course now a car has come up behind us, so it can act as the eye at intersections.](#)

[Take the turn, jump timelines to later when we were pulling out, and this is what you see:](#)

[Next intersection:](#)

[Take the turn, jump timelines, and again:](#)

[Next intersection you are being followed:](#)

[Take the turn and jump timelines to when you were pulling out of that street, and no cars, but a pedestrian just happens to be walking by:](#)

You can go like this all day, and you don't even need the internet. I could make two of these per day, just in America, for the rest of my life, and probably keep the briefs coming too.

The key is, there was not enough traffic coming out of this place to justify the buzz of activity around you when you arrived. Eventually that mathematics becomes second nature, and you begin to see the buzz when it is around you every time you reach a decision point.

Those cars were not scrambled. That is the normal vehicular and foot coverage loitering around in a Podunk meth-town in Montana, probably all excited they finally have something to do beyond watching the boring residents.

You can see what DEA is up against. A lone agent can't even do a single drive-by of a potential target without this thing up and on them in seconds. From there the only question is, does Cabal want to let DEA harvest that dealer and any accumulated earnings to feed it into the forfeiture machine, which I assume Cabal pilfers in some way, only sending scraps back to the various departments, or does Cabal want to keep that dealer in the flow.

I see this same shit tracking the US Marshals on Manhunter, and they seem clueless. When it began to obviously freak out was in an episode where they were hunting a

fugitive who worked in a maraschino cherry bottling facility in New York City. Even the Marshals were asking each other why guys were pulling right in front of their vehicle, backing up close to them, and parking (it was to orient a mic to listen to the Marshals in their vehicle and figure out exactly why they were sitting on the facility they were sitting on). My guess is they were packing something extra into some maraschino cherry bottles, ala Gus Fring's packing meth in his buckets of chicken ingredients. The smell of the cherries was so strong the Marshals were wondering what the smell was a block away, thinking it was something spilled in their car. So I assume it would be difficult to detect the product once it was in the bottles and the syrup on the outside of the bottles was washed off. Make the packages small round balls, and it would even look like cherries in the syrup.

Now try to picture all the silly boogaloo fantasies people have about how a Civil War would go, when this is tracking all the people who might be problematic during its many downtimes, when the google car is not driving around. Understand it knows exactly who they are and what they want to do.

This is why Cabal went so far, and why they felt they could sacrifice children and form pedophile networks, and steal trillions, and fuck over NSA, and try to take out our President, and nobody could touch them. Every one of them was protected by this thing, nobody could ever possibly touch them, and even law enforcement was fully under their thumb – and almost none know anything about it.

FISA declass will bring down the house, because nobody can believe it could possibly be as bad as it is. And that doesn't even factor in regular citizens being told they can't write shit on the internet without getting vibrated to degrade them.

There are no rules.

The only question is, can the God Emperor make some, and in so doing, make the American Myth real.

[Spread r/K Theory, because it is the enemy you don't know who will catch you sleeping.](#)

Why would they bother hiding their faces? Google censors them automatically through software.

[Reply](#).

[Anonymous Conservative](#) says:

January 13, 2020 at 4:52 pm

I think it is just because it is a camera, they are working, and the instinct is to hide. But also, Google doesn't always censor. Case in point, this guy in Lebanon would be recognizable:

<https://www.google.com/maps/@34.2516251,36.0012714,3a,26.6y,222.14h,85.45t/data=!3m6!1e1!3m4!1sAF1QipkNFdwm7wtKxPE9!2e10!7i5120!8i2560>

I am sure to them, knowing just how bad it is, they are very worried about people finding out they are involved. I have zero doubt it would all go public even if Q wasn't looking to purge Cabal. A lot of these intel guys probably join thinking they will serve the US, rather than protect the Cabal that has US Intel protecting Epstein's blackmail operation targeting US politicians to subvert our government. I am sure within their own ranks there are a lot pf people who would like to take it down.

And the truth is, from the inside, those people are probably under more coverage than I am, as are their wives, and their daughters, and their little children. Trying to fight against it would be very difficult, when it probably hears not only every word you whisper, but every breathe you take. But from the inside, accelerating it, to the point it pisses off millions of Americans, anybody can look at it themselves on street view, and all of them begin all acting out against it to overturn it might just be the only mechanism yo could enact which might stand a chance of taking it all down. Not only would it be little to no risk, the bosses might even give you a medal and promote you, as you get into an even better position to take the whole thing down.

Atavisionary says:

January 13, 2020 at 11:24 am

So, I like to follow various accounts of people doing what you are doing because they often have different perspectives and find different links. So its better to have many different pieces of the puzzle to help put together the complete picture. Some of it is crazier than others, but with how much has been revealed which is frankly unbelievable I no longer feel I have the luxury to reject certain ideas simply based on how “crazy” they sound. A global pedophile network sounded insane in 2015, and yet look at what has come out about that. Its all but been disclosed by this point.

So there is a twitter account I started following about a month ago called kabamur. He provides some interesting links, q related, but also UFO videos for some reason. Anyway, he has this theory that the Q posts about crops and harvests, puppets and puppet masters is actually a reference to the matrix where they grow or clone people, who can be programmed (head chips?) and placed into society to follow orders exactly. These soulless clones (and soulless here is meant in the literal sense, not a euphemism) or puppets then fill all these roles and can be guaranteed to follow orders. Comey’s corn field pictures being some sort of signal on when an important batch of these clones are ready.

https://twitter.com/kabamur_taygeta/status/1215996824546205696

I was amused by this, actually because that is just so nuts even my greater openness is forced to call BS. But then he shares a vid of trump accusing democrat Debbie Stabenow of being one of these clones!

https://twitter.com/kabamur_taygeta/status/1216374668845666305

I recently found out the “clown world” meme had several more hidden meanings, such as being a reference not just to craziness and intelligence ops, but also to child killer and pedophile clown John Wayne Gayce. If there is an truth to this, the NPC meme meme might be more literal than we previously believed. Non-player character would pretty aptly fit programmable, soulless clones.

While I didn’t doubt its possibility, one thing that always bothered me about you surveillance everywhere theory was I couldn’t understand how it could be possible to find that many morally bankrupt people willing to man the ops. Ya, I

don't have that much faith in humanity but even so it just seemed too much they could find that many people everywhere with absolutely zero conscience. Printing off soulless clones to insert into society into the surveillance state, among other things, could explain how they are able to populate their apparatus without having to worry about any pesky morality getting in the way.

I would need a lot more than a seemingly off-hand accusation by trump of someone being a clone to think this is possibly true. I just want to note that it would explain the biggest flaw, in my opinion, in the mass peopled surveillance you propose.

January 13, 2020 at 5:59 pm

For the first three years I thought it required a massive thing like Earth being an alien experiment, but now I think it is just human nature. Each intersection in Cut Bank MT has about 66 residences to the intersection with the main road. If you assume 2/3 of those residences are couples, and assume all we have is 4-6% of the population in this thing (which is TIPS' pilot program numbers, and which is actually low compared to some Secret Police States created in history), you end up with 110 people living there per intersection, and about 7 watchers per intersection, which is enough to create a regular team to monitor all the intersections, even before you factor in using kids, or that fact that with them driving out people like the dude in the 4Chan post, they could occupy 50 or 60% of the population, probably due to the meth operations. And in cities, where the buildings go vertical, you can see how you would have so many people per intersection you could have stationary units, mobile units, tech monitors, and so on. Plus people have a natural need to belong for some reason, so that alone would make people prefer being part of this, rather than pitted against thousands of people who are all up in their shit.

But there are weird anomalies, like the "Air Loom" guy which indicates they may have had the thru-wall weapons tech back in the 1800's. Which would be weird if that wasn't a disinformation operation.

All that said, I am a huge fan of info like you gave, so thank you for the links. All of that material is mind-expanding, by forcing you to consider things you would not otherwise think of, and in a world this weird, you can't be thinking too much out of the box.

Mind dropping a PDF for archiving purposes?

[Reply](#)

Bman says:

January 13, 2020 at 12:13 pm

Do you think the ground level people, doing this surveillance, will go hot once declassification occurs? There must be a few million of them.

Or cutting off the head and they will be lost?

[Reply](#)

[Anonymous Conservative](#) says:

January 13, 2020 at 6:19 pm

I have no idea. On the one hand, they stand to lose a lot, if everything goes public, because I am guessing their involvement in intruding on everyone's privacy will be documented. You know lawyers would flood in, and you would rapidly have everyone who was watched suing everyone who did the watching. And that is before you have cases like Mancini or Familia, where lives were irreparably altered by malicious abuse or outright attacks. What do you do to hundreds of people who swarmed Mancini, and drove him nuts, in the vulnerable position he was in because he served the nation selflessly, and then passively watched as got his will in order, got a gun, drove out to the ditch, put the gun in his mouth, and pulled the trigger? Does everybody go on with their lives like nothing happened?

Q could hide their involvement, just because you are looking at almost a civil war if it is revealed. But that would not motivate people to oppose this type of thing, so I don't see that as likely, and you would still have the network out there, waiting to be reactivated. And everyone in it has shown they liked it, so it might be as easy as quietly approaching each of them and linking them back up.

Maybe most likely will be a thing like a full reveal, with total forgiveness/reconciliation, like South Africa or something. Though that has its own problems, as some will feel evil was allowed to get away with it, and you will have disassembled the only machine that could prevent vigilante type activity. But it might fit with Q saying, *“They will not be able to walk the streets.”* He might not have been talking about Hillary with that.

Don't forget, I will bet there were pretty, innocent young girls who were going places, who (((They))) identified as risks, and sent pick-up artists in to pick up and lure into a place with cameras where they could get blackmail. Imagine if that was your innocent 16 year old daughter, and then you were told, we won't do anything to them, and they just got away with defiling your daughter and humiliating her. Fathers are going to kill people. And jury nullification will play a part in that too. No way would I convict any father who took matters into his own hands, no matter what he did, and I suspect 90% of the public will be feeling like that. Maybe the punishment will be simply not knowing what will happen, and ending up moving out.

I think you will have to have some sort of reveal of their involvement, just because you will need to put together juries, and if they are loyal to Cabal, that will have to be out in the public domain, so you can get clean juries.

The whole thing is a big puzzle if you try to formulate how you would handle it with an eye to preserving the union and maintaining law and order, as well as justice. There really is no good option.

But you have to get rid of it at all costs, so you will have to embrace a bad option somewhere that is going to hurt someone.

Montanans dislike outsiders for reasons that have nothing to do with meth and I would not put it past them to coordinatedly lie about it on 4chan.

White box truck at the start is fitted with a reefer (refrigeration unit). I cannot ever recall seeing a refer on a plain, unmarked white box truck before. They are almost exclusively used for food transport. However, if you had a bunch of electronic equipment you needed to keep cool, it could become very useful.

Also, the reefer doesn't appear to be running.

The good news is that in my experience, they seem to respond to incentives. If you don't actively evade them, they tend to leave you alone. When they've started slowing me down in traffic, I start using tradecraft and announce when I get home that I'll stop being a pain in the ass when they stop fucking with my commute, and traffic will go back to normal for a while.

"[I] announce when I get home that I'll stop being a pain in the ass when they stop fucking with my commute, and traffic will go back to normal for a while."

It is amazing. In America. And I have zero doubt this is entirely true, and know this is exactly how it works.

ACLU has found out that any place within 100 miles of any US border (E, W, N, S) has [wrongly] become a "Constitution-Free-Zone", where virtually ALL human and natural Rights seem to no longer exist:

The Constitution in the 100-Mile Border Zone

Fourth Amendment of US Constitution protects Americans [and non-Americans – ExpatNJ] from random and arbitrary stops and searches. According to US government, however, these basic Constitutional principles do not apply in the 100-Mile Border Zone

<https://www.aclu.org/other/constitution-100-mile-border-zone>

Cut Bank Montana is less than 30 miles from the Canadian Border. Seems a convenient location for Freedomistas to drop-off, repackage, re-load and re-route good going in either direction (N>S or S>N, not unlike a UPS or USPS Sorting Facility), that The Controllers want controlled.

Kudos to the author for exposing the surveillance in Cut Bank. But, keep your head on a swivel; however innocent, you might just be a target of *either* 'faction'.
